PREFACE.

EVERY effort in reason has been made in the preparation of this the twenty-ninth edition of the Universal Electrical Directory, to ensure the accuracy of its contents.

The year 1909 was one of exceptional importance to electric lighting, for undoubtedly the outstanding feature was its advance in the public favour owing to the excellent qualities of the metallic filament lamp being appreciated everywhere. The lamp-makers could not easily keep pace with the demand, so great has it been. The turn of the electricity suppliers and of the plant manufacturers to share in the benefits is not far away—indeed, it is appearing on the horizon now. The electrical contractors, too, are sharing, for in some places, at any rate, the close of the year found them very busy indeed.

There are clear indications of a general trade revival, which may proceed at a greater pace as the political position becomes more settled. If that revival gathers force, it should greatly assist both electric light and power progress, the householder and the works owner being then more willing to change over. There is a vast unconverted field in the great industrial works of this country. We hope that 1910 may see an important movement toward their electrification. The year just closed witnessed headway in the electrical equipment of steel-works, and coke-oven gases are being utilised. The question of electricity in mines was never so prominently to the fore as it is now.

In the Metropolitan area, both municipalities and companies supplying electricity—their period of nervous unrest at an end—have entered upon a joint campaign for popularising electricity. Only abundant fruit can result from such an effort. The big power companies of the kingdom are still making progress at a rate which is far slower than it ought to be. Bad trade has been a real hindrance to them, but some of them report that they are already feeling the effects of the recovery.

The year was sadly disappointing in regard to electric traction at home, whatever the progress abroad. With the solitary exception of the important single-phase section—the South London line opened in December—nothing new falls to be recorded. The experience obtained on this line is expected to largely influence the railway mind. May the resultant decision be not long deferred.

Electric tramway development in the United Kingdom is scarce, and suppliers of rolling stock and electrical equipments are looking in vain for signs of real revival in this department; there are very few new schemes of any consequence to occupy the attention of Parliament in 1910.

Electrical investments, save in a few special cases—such as cable manufacturing companies and English-owned light, power and tramway companies operating in foreign countries—have shown only a slight improvement, and it would require some boldness to say when a substantial and lasting recovery may be anticipated. It is felt that if financial support were more freely forthcoming to enable our concession hunters and manufacturers to obtain and carry out large colonial and foreign contracts and concessions, Britishers could secure much business that now goes to other countries.

The year 1910 will stand out as an Exhibition year, for our manufacturers will have admirable opportunities for demonstrating right before the eyes of the foreign buyer their capabilities for meeting the requirements of such markets as Brussels, Brazil and Japan. Our exports of electrical manufactures continued to increase during 1909, but there is much scope still remaining for further advance, by the adoption and continuation of a progressive policy.

The attention of our readers is directed to page 694, on which will be found a list headed "Specialities—Electrical, & Trade Marks." Under this heading manufactures are classified according to the registered or trade name of the article, followed by the name and address of the manufacturer or agent.

The Publishers are often asked for voltages, &c., and beg to call attention likewise to the lists of Electricity Works on pages 497 & 969, where such particulars are given.
